

## **The 8.3 d atmospheric eigenmode**

J. Wuensch

Deutsches GeoForschungsZentrum GFZ, Department 1: Geodesy and Remote Sensing, Potsdam, Germany  
(wuen@gfz-potsdam.de)

The atmospheric eigenmode of period approximately 8.3 d is studied both in Atmospheric Angular Momentum and in polar motion (from the GGOS-D project).

The methods used include the Lomb-Scargle amplitude spectrum as well as product spectra of sub-intervals.
