

The Multiscale Nature of El Niño

C. Penland

NOAA, Boulder, Co., USA (Cecile.Penland@noaa.gov)

El Niño is a conglomeration of phenomena with a wide range of timescales. In this talk, I discuss a pattern-based filter designed to isolate as much as possible the El Niño signal in tropical sea surface temperatures. The filter is developed on seasonal timescales but can be applied to weekly timescales as well, having many practical advantages.
