

## **How Climate Change Affects Water Resources in the Alps**

B. Schädler

Federal Office for the Environment, Bern, Switzerland (bruno.schaedler@bafu.admin.ch)

Water resources in the Alps are abundant, but long term observed climatological, glaciological and hydrological time series clearly show ongoing climate changes. And regional climate change scenarios indicate even more changes. Will we experience more severe natural disasters in the Alps and will water scarcity affect alpine agriculture and tourism? Or might the importance of the Alps as «Water Tower of Europe» even grow?
