

## **Archaeomagnetic dating of kilns in Portugal**

M.E. Evans

University of Alberta, Institute for Geophysical Research, Edmonton, Canada (evans@phys.ualberta.ca)

The first archaeomagnetic results from Portugal are reported, consisting of directional data from four Roman kilns at three separate sites (Castel de Vide, Peniche, and Siexal). The observed directions are compatible with the recently-published Spanish secular variation curve and imply that the kilns date to  $\sim 50$  CE (Peniche),  $\sim 100$  CE (Castel de Vide), and  $\sim 250$  CE (Seixal).
