(1) NIOZ Royal Netherlands Institute for Sea Research, Data Management Group, Den Burg, Netherlands (bruin@nioz.nl),

(2) Marine Information Service (MARIS), Voorburg, Netherlands

This poster will present the Dutch NODC-i project, the national infrastructure for access to oceanographic and marine data and information in The Netherlands. The NODC-i project is run by the National Oceanographic Data Committee (NL-NODC) of The Netherlands. The NL-NODC is the national representative in the EU-SeaDataNet project. The NODC-i project is a technical project which will result in the Dutch node in the SeaDataNet infrastructure. The goals of the NODC-i project are therefore very similar to the goals of the EU-SeaDataNet project, albeit aimed at a national level interconnecting the data centres of the following Dutch institutes: RWS, KNMI, NIOZ, NIOO-CEME, TNO B&O.
