

The application of the universal hydrological model “Hydrograph”

O. Semenova

State Hydrological Institute, Department of Experimental Hydrology and Modelling of Hydrological Processes, St. Petersburg, Russian Federation (omakarieva@gmail.com)

Several examples of successful use of the universal hydrological model “Hydrograph” developed at the State Hydrological Institute for simulations of runoff and state variables at basins regardless of their scale and climate/landscape conditions will be presented. The watersheds were located in the Central, North West of Russia, in the steep mountainous areas of the Southern Urals, the permafrost area of Eastern Siberia, the Yamal peninsula, and two tropical areas, one in Angola and one in Colombia. The poster illustrates the good results obtained, regardless of watershed scale, season and geographic location.
