

## **An examination of concurrent ion features and small scale magnetic events in the Venusian ionosphere.**

G. Guymer, M. Grande, I. Whittaker, and The ASPERA-4 Team  
Institute of Physics, Aberystwyth University, SY23 3BZ, United Kingdom

Ion data received by the IMA (Ion Mass Analyser) onboard Venus Express has been examined for features concurrent to magnetic flux ropes detected in magnetometers data within the Venus ionosphere. The interactions of these events are being examined as possible contributors to atmospheric erosion.
