

GRACE Mission Status

Srinivas Bettadpur (1), Byron Tapley (1), Michael Watkins (2), and Frank Flechtner (3)

(1) The University of Texas at Austin, Center for Space Research, Austin, United States (srinivas@csr.utexas.edu, +1 512 471-3570), (2) Caltech/Jet Propulsion Laboratory, Pasadena, California, USA (michael.m.watkins@jpl.nasa.gov), (3) GFZ German Research Centre for Geosciences, Oberpfaffenhofen, Germany (flechtne@gfz-potsdam.de)

At the time of this presentation, the joint NASA/DLR GRACE mission will have delivered new insights into mass flux in the Earth System for more than 8 years. The value of this extended dataset is particularly remarkable, given that the mission was designed for a 5-year lifetime.

This presentation will summarize the current status of the GRACE mission, and its science outcomes; the status of its science data system and data re-processing plans; and prospects for its future.
