Running a seismic data center with Antelope at ZAMG

Nikolaus Horn

ZAMG, Vienna, Austria (nikolaus.horn@zamg.ac.at, +43 1 3686621)

Beeing one one of the first customers of the commercial data acquisition system Antelope, ZAMG has now over 10 years of experience running a medium size data center with the commercial software package Antelope from BRTT. We outline the configuration of the data center facilities, and describe a few application that have been designed based on the Antelope toolbox for software development. Since ZAMG hosts the Austrian NDC, we present the usage of the Antelope software in that framework.
