

## **Langmuir turbulence effects on electron beam precipitation in solar flares**

Taras Siversky and Valentina Zharkova

University of Bradford, Computing, Bradford, United Kingdom (v.v.zharkova@brad.ac.uk)

We study the evolution of an electron beam injected into the solar atmosphere taking into account Langmuir wave turbulence generated by the beam of electrons. We investigate possible spatial and time scales of the Langmuir turbulence generation for different energies of particles, beam parameters and mechanisms of energy losses.
