

Radon, Health and Natural Hazards and IGCP Project 571

Robin Crockett (1) and Gavin Gillmore (2)

(1) Data Analysis Group, School of Science and Technology, University of Northampton, Northampton, UK., (2) CEESR, School of Geography, Geology and the Environment, Kingston University, Kingston-upon-Thames, UK.

The first – launch – meeting of IGCP Project 571 (Radon, Health and Natural Hazards) was held at the 2009 EGU General Assembly and a total of 24 abstracts was submitted to the three formal sessions. Subsequently, formal communications networks have been established between lead groups in the UK, France, Poland, India and Taiwan and these networks are extending to include Ghana, the Czech Republic, Greece, Trinidad & Tobago, Spain, Japan and Canada. There is also the strong possibility of a UK-India Commonwealth Fellowship to support certain of the Project's activities.

The presentation will comprise a review of the first year and set out objectives for the second and subsequent years, and will introduce the Project sessions and presentations at the 2010 EGU General Assembly.

See also the session abstract.
