

## Wind Wave Spectrum Transformation in the Coastal Zone

Mohammad Aminshar

Guilan University, Iran (aminshar@hotmail.com)

Kinetic equation for the frequency spectrum of the wind waves is solved analytically with neglecting the nonlinear interaction between spectral harmonics. For the narrow-angle spectrum the one-dimensional kinetic equation is integrated and describes the transformation of the wind wave spectrum in the coastal zone with variable depth. The spatial spectrum is found using the exact dispersion relation for water waves in basin of finite depth.
