

Chaotic and Stochastic Dynamics of Kuroshio Path Transitions

Stefano Pierini (1) and Henk A. Dijkstra (2)

(2) Utrecht University, Institute for Marine and Atmospheric Science, Utrecht CC, Netherlands (dijkstra@phys.uu.nl), (1) Dipartimento di Scienza per l' Ambiente, Università di Napoli Parthenope, Naples, Italy (stefano.pierini@uniparthenope.it)

An overview is provided of recent efforts to understand the decadal time scale path transitions of the Kuroshio Current in the Pacific using a hierarchy of ocean models and methodology from the theory of (random) dynamical systems.
