

## **Venus Express Magnetic Observations of the Venus Magnetotail**

Tielong Zhang and Wolfgang Baumjohann

Space Research Institute, Austrian Academy of Sciences, Graz, Austria (tielong.zhang@oeaw.ac.at)

Although there is no intrinsic magnetic field at Venus, it possesses a well-defined magnetotail as part of the induced magnetosphere. Previous PVO measurements revealed the general features of this magnetotail in the distant wake region, mainly 8 to 12 R<sub>V</sub> down the tail. In this study, we examine the Venus Express magnetometer data and perform a statistical study of the average structure of the near Venus magnetotail, 1 to 3 R<sub>V</sub> down the tail.
