Psychologists proved, that specialists, who are busy both in the field of flying activity and marine service, are most subject to stressful situations. Meeting rogue-waves, ships get into the most trying situation. The fact of rogue-waves sudden appearance demands special professional training as well as psychological preparation from the crew of any ship. Due to the rogue-waves sudden appearance it is necessary to study all aspects of this phenomenon. The research of rogue-waves and their characteristics is extremely important for physicists and mathematicians as well as sociologists and psychologists, because to minimize the harm to humanity is the final goal of efforts of all scientists. Theoretical basis of methods of psychological preparation of human being to a stressful situation and his support in extreme circumstances is discussed in given presentation.
