

Validation of Land Carbon Products over The Netherlands

J. de Vries

Netherlands (jdevries@knmi.nl)

Most Land Surface Models do not take into account water table dynamics. In the Netherlands the water table is regulated. This poses a challenge to the accurate modeling of carbon and water fluxes and vegetation. We present the latest validation results for 1D and 2D products for these and other land surface parameters over the Netherlands, generated with the SURFEX model.
