

## **PEP725 Pan European Phenological Database**

E. Koch, W. Lipa, M. Ungersböck, and S. Zach-Hermann

Central Institute for Meteorology and Geodynamics, Climatology, Vienna, Austria (e.koch@zamg.ac.at)

PEP725 is a 5 years project with the main object to promote and facilitate phenological research by delivering a pan European phenological database with an open, unrestricted data access for science, research and education. PEP725 is funded by EUMETNET (the network of European meteorological services), ZAMG and the Austrian ministry for science & research bm:w\_f.

So far 16 European national meteorological services and 7 partners from different national phenological network operators have joined PEP725.

The data access is very easy via web-access from the homepage [www.pep725.eu](http://www.pep725.eu). Having accepted the PEP725 data policy and registry the data download can be done by different criteria as for instance the selection of a specific plant or all data from one country. At present more than 300 000 new records are available in the PEP725 data-base coming from 31 European countries and from 8150 stations. For some more stations (154) META data (location and data holder) are provided. Links to the network operators and data owners are also on the webpage in case you have more sophisticated questions about the data.

Another objective of PEP725 is to bring together network-operators and scientists by organizing workshops. In April 2012 the second of these workshops will take place on the premises of ZAMG. Invited speakers will give presentations spanning the whole study area of phenology starting from observations to modelling.

Quality checking is also a big issue. At the moment we study the literature to find appropriate methods.
