

## **E-GVAP third phase**

Henrik Vedel (1), Siebren de Haan (2), Jonathan Jones (3), Gemma Bennett (3), and Dave Offiler (3)

(1) Danish Meteorological Institute, Copenhagen, Denmark (hev@dmi.dk), (2) Royal Dutch Meteorological Institute, (3) UK Metoffice

By January 1'st 2013 E-GVAP-III (EIG EUMETNET GNSS Water Vapour Programme) was launched. Phase III will run to end of 2017.

The main purpose of E-GVAP is to collect and distribute ground based GNSS delay estimates for use in weather forecasting.

E-GVAP is based on a tight collaboration between geodesy and meteorology. We describe the collaboration, review the current status, and explain the future goals.
