Executive Council of the IAPG - International Association for Promoting Geoethics ([iapgeoethics@aol.com](mailto:iapgeoethics@aol.com))

Geoethics consists of the research and reflection on those values upon which to base appropriate behaviours and practices regarding the Geosphere. Geoethics also deals with problems related to risk management and mitigation of geohazards. One of the most important goals of the Geoethics is to foster the proper and correct dissemination of results of scientific studies and other information on risks. Moreover, Geoethics aims to improve the relationships between the scientific community, mass media and public and aims to organize effective teaching tools to develop awareness, values and responsibility within the population. Geoethics should become part of the social knowledge and an essential point of reference for every action affecting land, water and atmosphere usage that is taken by stake-holders and decision-makers.

Although Geoethics is a young discipline, it provides a forum for open discussion inside the Geosciences on the social and cultural role that Geoscientists can play in society. First, Geoethics represents an opportunity for Geoscientists to become more conscious of their responsibilities in conducting their activity, highlighting the ethical, cultural and economic repercussions that their behavioral choices may have on society. From this point of view Geoethics, at this stage of its development, is primarily an attitude of thinking: through consideration of geoethical questions, Geoscientists have the opportunity to ask questions about themselves, their skills, the quality of their work and the contribution they can provide to the healthy progress of humanity.

The International Association for Promoting Geoethics (IAPG: <http://www.iapg.geoethics.org>) is a new multidisciplinary, scientific platform for widening the debate on problems of Ethics applied to the Geosciences, through international cooperation and for encouraging the involvement of geoscientists on Geoethics themes. The IAPG was founded to increase the awareness inside the scientific community of the social role of geoscientists, to bring the Geosciences closer to society, thereby contributing also to the acquisition of knowledge in dealing with natural hazards.
