

Explaining the Sentinel-3 Marine Centre and related services

Hans Bonekamp, Hilary Wilson, Rosemary Munro, Francois Montagner, and Dany Provost
EUMETSAT, Darmstadt, Germany (hans.bonekamp@eumetsat.int)

This presentation provides an overview of the Sentinel-3 Marine Centre and related services and topics. In phase E of the Sentinel-3 program, EUMETSAT will be the Sentinel-3 satellite and Sentinel-3 Marine Centre operator. Verification and validation activities for the Marine Centre have recently started at EUMETSAT. The cal/val plans and mission performance set-up have been defined, together with ESA, to ensure that the core mission performance and operational products will be state of the art, and that new product definitions can be taken on board for operational services. To support the discussions in this session and ensure familiarity with the planned operational data streams, we will provide an overview of the set-up of product monitoring and services originating from the EUMETSAT premises. Major recent developments regarding EUMETSAT involvement in other areas of the sentinel program will also be presented.
