

## Results of the 3rd Workshop of the Interdisciplinary Biomass Burning Initiative IBBI of WMO, IGAC & iLEAPS

Johannes Kaiser (1,2,3) and Melita Keywood (4)

(1) KCL, UK, (2) MPIC, Germany, (3) ECMWF, UK, (4) CSIRO Australia

IGAC, iLEAPS and WMO founded the Interdisciplinary Biomass Burning Initiative (IBBI) in 2013. Its primary goal is to foster interdisciplinary research on biomass burning (BB), to improve atmospheric composition and air quality monitoring and forecasting through better scientific understanding of the various processes around BB.

IBBI has organised a workshop that is being held on 23-26 April 2014 at Schloss Ringberg in Germany. It is the third and final in a series of workshops for the establishment of IBBI, the first in Geneva during July 2012, the second in Vienna during May 2013. The aims of the third workshop are to

- (1) Identify secondary goals for IBBI
- (2) Develop strategies to achieve the goals
- (3) Plan a COST action
- (4) Plan a special issue of Atmospheric Environment for publication on emerging issues in BB research
- (5) Identify members of the IBBI scientific steering committee.

We report highlights and results from this workshop.
