

Spatial design: overview and new developments

Werner Mueller

Austria (werner.mueller@jku.at)

In this presentation I intend to give a comprehensive state-of-the-art overview on both classical and modern treatments of network design and planning for spatial and spatio-temporal data acquisition. Special emphasis will be given on recently developed simulation-based approaches, particularly for situations where the likelihood cannot be directly evaluated. I will provide illustrative applied examples from groundwater monitoring and spatial extremes in temperatures.
