

## Experiences from 10 years of school programmes at GEOMAR Kiel

Joachim Dengg

GEOMAR Helmholtz Centre for Ocean Research Kiel, School Cooperations, Kiel, Germany (jdengg@geomar.de)

GEOMAR Helmholtz Centre for Ocean Research Kiel, Germany, started a programme of cooperations with secondary schools in 2003, which has been expanding continually since that time. By active involvement of teachers and students, the Centre's research topics are communicated to schools, and young people are encouraged to develop their interest for biogeosciences. The portfolio of activities includes: project work with schools over periods from one day to several months, individual student theses at the research centre, internships, a weekly „Research Club“ allowing individual experiments, summer school programmes, teacher training courses, joint activities with international partners and a video-project in which students portray scientific aspects of oceanic oxygen minimum zones (in the context of the Collaborative Research Center SFB 754) to other students. Essential prerequisites for these activities are the direct involvement of the Centre's researchers who contribute their expertise and act as role-models for the students, dedicated staff for coordination and continuity, and financial and structural support both at the research centre and the schools.
