Over the past ten years, there are several types of community disaster prevention in Taiwan. According to the type and scope of their communities, these types are divided into the rural type of communities disaster prevention, the community-based urban neighborhood of communities disaster prevention and the condominium buildings of communities disaster prevention. The significantly improvement of disaster prevention efficacy are obvious because of the implement of the disaster prevention drills combined with school and community in rural and urban-type communities. The education of disaster prevention is the very important media to the processes of interaction with related properties in adjacent tissue or nearby residents. Some schools have been designated as the evacuation shelters. It will greatly enhance the energy of the disaster prevention of local district if the organization of community and school are combined operation. This promotion way is refer to the community disaster prevention and disaster preparedness joint promotion of campus for future reference.

Government-led regional disaster prevention education services group is responsible for assisting in the implementation of a routine inspection of the campus safety, the disaster prevention drills and school counseling works. The works also included the implement of the disaster prevention drills combined with the adjacent community organizations during exercise. The highlights of the drill included (1) refuge and evacuation (2) the establishment of a joint disaster response organization (3) emergency (4) placement and notification.
