

Aims and Advances of the PROGRESS Project

Simon Walker (1), Tony Arber (2), Natalia Ganushkina (3), Peter Wintoft (4), Mike Liemohn (5), Yuri Shprits (6), Vladimir Krasnoselskikh (7), Robertus Erdelyi (8), and Michael Balikhin (9)

(1) University of Sheffield, United Kingdom (Simon.walker@sheffield.ac.uk), (2) University of Warwick, United Kingdom (T.D.Arber@warwick.ac.uk), (3) FMI, Finland (nataly.ganushkina@fmi.fi), (4) IRF, Lund, Sweden (peter@lund.irf.se), (5) University of Michigan, Ann Arbor, USA (liemohn@umich.edu), (6) UCLA, USA, (yshprits@igpp.ucla.edu), (7) LP2CE, CNRS, Orleans, France (vkrasnos@cirs-orleans.fr), (8) University of Sheffield, United Kingdom (r.von.fay-siebenburgen@sheffield.ac.uk), (9) University of Sheffield, United Kingdom (m.balikhin@sheffield.ac.uk)

The overall aim of the project PROGRESS is to exploit the synergy of the complementary expertise available within the partner groups, the available spacecraft and ground based data combined with state of art data assimilation methodologies in order to develop an accurate and reliable forecast of space weather hazards. The advances achieved by the PROGRESS team in the first year and main future challenges of the project are presented and discussed.
