

## **CHANGE: Anthropogenic change through the eyes of a child**

Isaac Kerlow

Earth Observatory of Singapore, Singapore, Singapore (isaac@ntu.edu.sg)

Constant change is a natural part of Earth's life, and its interconnected systems can easily adapt to slow change. But life is at risk when the natural balance gets disrupted by rapid change. This presentation focuses on the interdisciplinary development and production of CHANGE, a short animated film that shows how human growth and prosperity have changed Planet Earth. The film presents the essence of anthropogenic climate change as seen through the eyes of a pre-teen child. Watch the official trailer here: <https://vimeo.com/187618128>
