

The sun,the planets and life on Earth

Tacu Cristina Claudia

Romania (tacu_cryss77@yahoo.ro)

We all knowthat Earth,our planet,it's not alone in the Universe.We will discover together a few of its secrets:

0 The influence of the sun on our planet is very important.It provides us thelight ,the warnith and the enery without whice life on Earth wouldn't be possible.

0 Thank to the Sun and the endless spinning of our planet around its own axe and, at the same time around this star,we receive as a gift the day,the night,the seasons.

0In our Solar System there are other spheres appart from the Sun and planets -the asteroids ,wandering pieces of stone.It is said that many milions of years ago it they made a lot of plants and animals disappear.

If I have arisen your curiosity,let's go!
