

The History of Hydrology Wiki Project

Keith Beven

Lancaster University, Lancaster Environment Centre, Lancaster, United Kingdom (k.beven@lancaster.ac.uk)

The history of hydrology wiki site at www.history-of-hydrology.net has now been on-line for a couple of years and has accumulated some 120 biographies of hydrologists, as well as material on the histories of experimental catchments, hydrological institutions, historical hydrological textbooks, and annotated papers about the history of hydrology. As a wiki site anyone can register to add material to existing entries – stories and anecdotes about the past hydrologists and their collaborations are particularly welcome. Contributions and suggestions for new entries are always welcome, especially from the non-English speaking hydrological world. This poster is intended to encourage discussion of the site and new entries. It is hoped that over time the site it will become a useful resource for the hydrological community and that the contributions of previous generations of hydrologist will not get forgotten.
