

## **2008 - 2018: Celebrating 10 Years of Geoscientific Model Development (GMD)**

Rolf Sander (1), Lutz Gross (2), David Ham (3), Julia Hargreaves (4), Astrid Kerkweg (5), and Didier Roche (6)  
(1) Max Planck Institute for Chemistry, Air Chemistry Department, Mainz, Germany (rolf.sander@mpic.de), (2) The University of Queensland, School of Earth and Environmental Sciences, Brisbane, Australia, (3) Imperial College London, Department of Mathematics, South Kensington Campus, London, United Kingdom, (4) BlueSkiesResearch, The Old Chapel, Albert Hill, United Kingdom, (5) University of Bonn, Meteorological Institute, Germany, (6) Laboratoire des Sciences du Climat et de l'Environnement, INSU/CNRS, Laboratoire des Sciences du Climat et de l'Environnement, France

The EGU journal Geoscientific Model Development (GMD) is an international scientific journal dedicated to the publication and public discussion of the description, development, and evaluation of numerical models of the Earth system and its components. The following manuscript types can be considered for peer-reviewed publication: (1) geoscientific model descriptions, from statistical models to box models to GCMs; (2) development and technical papers, describing developments such as new parameterizations or technical aspects of running models such as the reproducibility of results; (3) new methods for assessment of models, including work on developing new metrics for assessing model performance and novel ways of comparing model results with observational data; (4) papers describing new standard experiments for assessing model performance or novel ways of comparing model results with observational data; (5) model experiment descriptions, including experimental details and project protocols; (6) full evaluations of previously published models.

To celebrate the 10th anniversary of GMD, we present a summary of our journal statistics and discuss our experience with open access publishing in the geosciences.
