Earth Science Day at my school

Jolanta Sulma

Bochnia, Poland (jola.sulma@wp.pl)

I teach at school, where students like and are interested science. That's why I take part in various competitions with my students:

the European Space Agency 'Astro Pi' competition;

nationwide competition "Remote Mars Yard";

nationwide "Put on the Sun" competition;

nationwide competition "Be like Ignacy."

I and my students also take part in various projects:

planetary search program "Mr. Starrs";

CREDO project - searching for cosmic particles.

For many children it is boring to stay only at school. I organize workshops and trips to universities, museums, planetariums or outside.

This year, I decided to organize the Earth Science Day in April at my school. It will be open day for everyone. Children and parents will be able to come and learn a lot of information and see the experience in physics. There will also be nature games for young children.
