

Petroleum Generation into law Physic

Yuri Galant

Independent Researcher, Independent Researcher, Yokneam-moshava, Israel (bakinez1@mail.ru)

- In spite of the fact that oil is the most studied product, the problem of Petroleum Genesis (PG) is not solved, and fierce irreducible discussions have been going on for more than 100 years. The same oil fields are considered incomparably or Sedimentary Genesis, or Magmatic Genesis!!! Einstein said that if the problem is not solved, it must be transferred to another level. On the modern day, the theory of quantum mechanics is the most powerful and accurate description of Nature. It is believed that the world is ruled by quantum laws: 1 superposition, 2 entanglements, 3 uncertainty. We need to build a new hypothesis PG to get the correct answer. New laws of quantum mechanics make it possible to rethink the reality of PG. The laws of quantum mechanics are subject to every atom, the particles of which are planets, stones, oil, etc. (this means that gives us competence - a reason to consider PG in the laws of quantum mechanics). We will bring to the solution of PG the greatest scientists: Einstein, Schrödinger, Bohr, Planck, Heisenberg, De Broglie, Galant, i.e. based on their laws look at PG. 1 superposition. Oil field is simultaneously located in two or in several mutually exclusive states, at the same time of Magmatic genesis and Sedimentary genesis. The deposit will be in a state of genetic superposition, that is, to have all the values of the genesis (sedimentary genesis and magmatic genesis). Analyzing the effect on the system and the state is destroyed (superposition is destroyed) and one of the states can be observed. 2 entanglements. When it is determined that, for example, the deposit of sedimentary genesis, the remaining state will instantly change to magmatic genesis. Changing the state of one, immediately determines the state of another. The other instantly reacts oppositely to the state of the first, since the various antagonistic geneses are entangled. 3 uncertainty. Since different genesis is entangled and the genesis is therefore uncertain, it is impossible to say that there is only one definite genesis and the impossibility to determine the absoluteness of the genesis. PG is the process of the probabilistic world. Like the Schrodinger's Cat at the same time alive and not alive, so the G at the same time sedimentary genesis, and magmatic genesis. PG is ruled by probability, not reliability, and oil cannot be of one definite genesis.
