

Using Technology and Props effectively in the 21st Century Classroom

Anya Starling

School, Geography, United Kingdom (starling.a@millfieldschool.com)

Since many of us were at school technology and the learning environment have moved on considerably. Teaching at a school that requires pupils to have an iPad with them for every lesson, we need to ensure that learning using iPads is effective, engaging and helps to make progress, rather than a gimmick. Furthermore, some concepts are difficult for pupils to understand and so using props appropriately can significantly enhance a pupil's understanding of what is being taught. The poster will show some of these technological tools and props in action and describe the benefits they gave in lessons to all learners.
