MUQUANS: QUANTUM SENSORS & LASER SYSTEMS FOR SENSING AND METROLOGY

- ✓ Company created in 2011
- ✓ 30 employees
- ✓ Technology transfer from [LNE-SYRTE](#) and [LP2N](#) laboratories

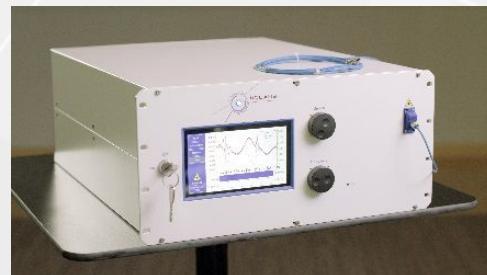

Cold atom gravity meters ($\Delta g/g \approx 10^{-9}$)

Cold atom atomic clock for VLBI ($\Delta f/f \approx 10^{-15}$)

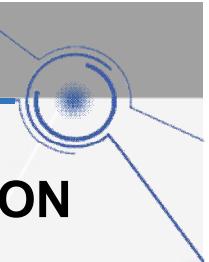

Laser solutions for optical and fiber sensing ($\Delta\lambda/\lambda \approx 10^{-10}$)

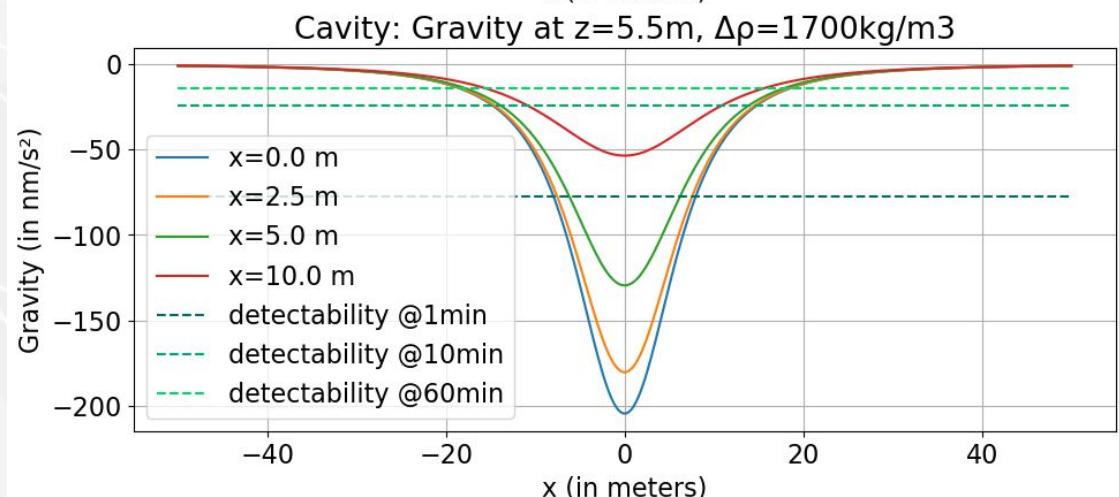

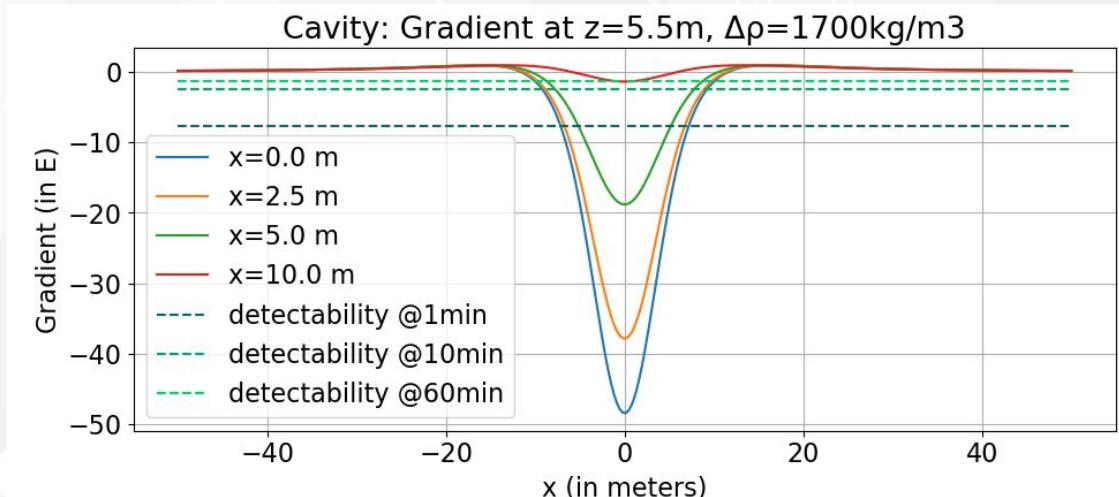

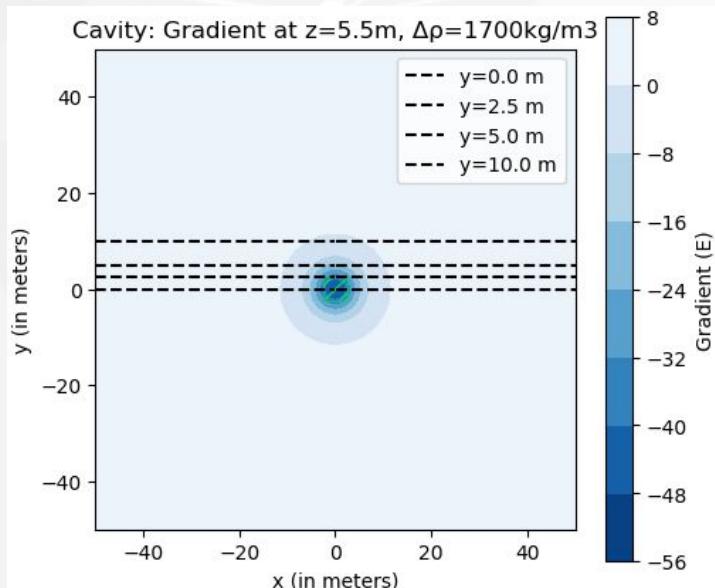

Optical frequency transfer for chronometric geodesy ($\Delta f/f \approx 10^{-20}$)

WHY THE A-DIG: EXAMPLE OF SUB-SURFACE STRUCTURE DETECTION

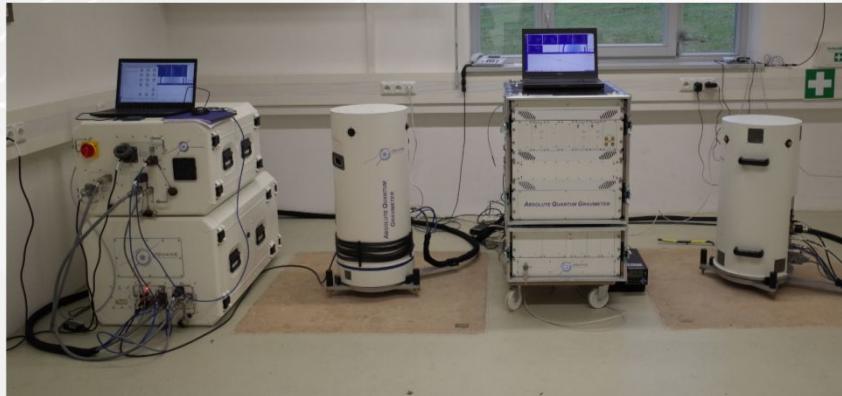

Simulated signals for a cavity of $5 \times 5 \times 5$ m

$$1\text{E} = 0.1\mu\text{Gal}/\text{m}$$

MUQUANS QUANTUM GRAVITY METERS: BACKGROUND

- Same technology as the Absolute Quantum Gravimeter

Gravimeter outside of the laboratory](#)

Federal Agency for
Cartography and Geodesy

- Tight scientific collaboration with

A-DIG: MUQUANS QUANTUM DIFFERENTIAL GRAVIMETER

- An instrument that measures **simultaneously** the absolute gravity acceleration and its gradient.
- Measures the vertical variation of the gravity (Γ_{zz}) from the differential measurement of two atom interferometers using laser-cooled atoms¹.

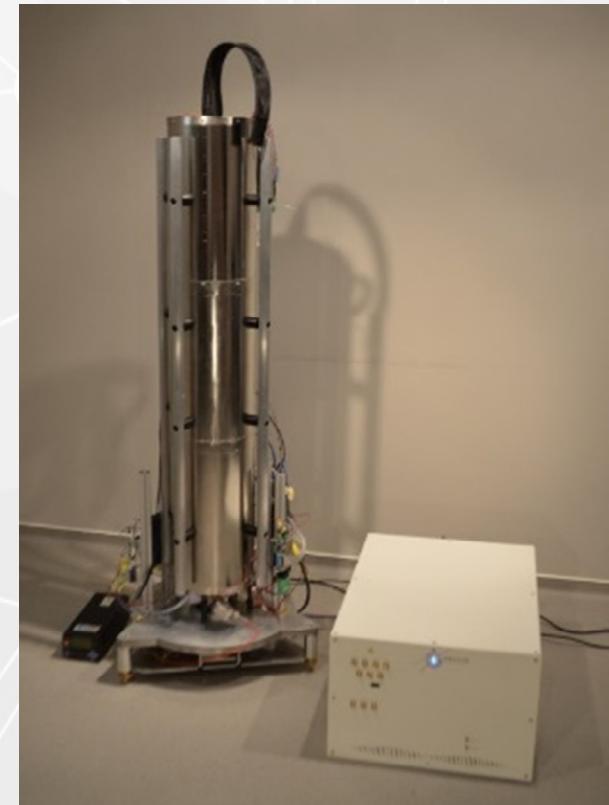

¹M.Langlois et. al. Phys.Rev.A **96**, 053624 (2017)

- Demonstrated performance:

Gravity measurements :

Sensitivity = $30 \mu\text{Gal}/\sqrt{\text{t}}$

Resolution of $1 \mu\text{Gal}$

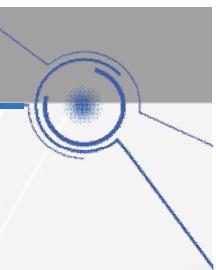

Gravity gradient measurements :

Sensitivity = $70 \text{ E}/\sqrt{\text{t}}$

Resolution of few E

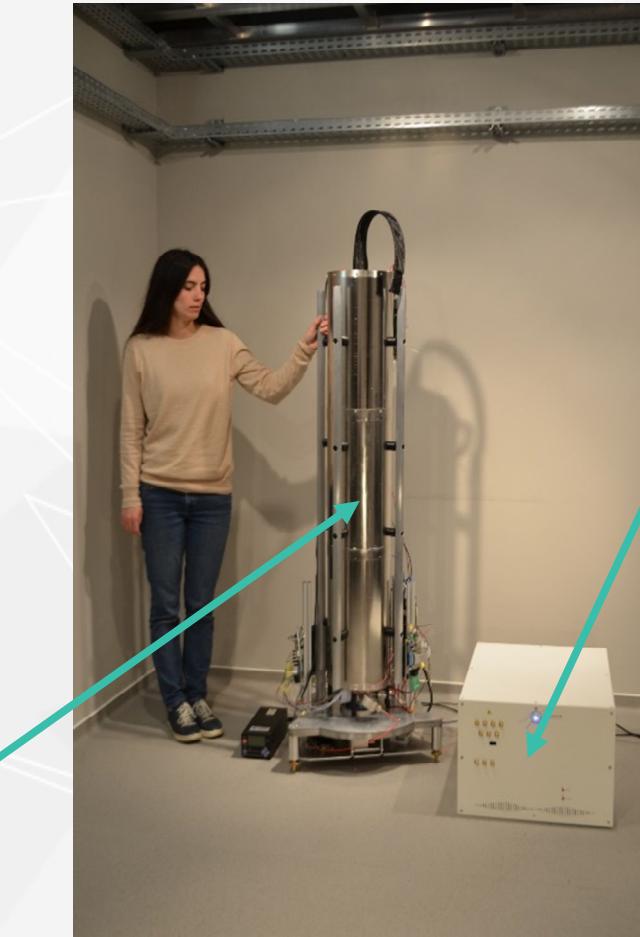

1E = $0.1 \mu\text{Gal}/\text{m}$

A-DIG: MUQUANS QUANTUM DIFFERENTIAL GRAVIMETER

The sensor head

- . Vacuum system
- . Electronics
- . Magnetic shield

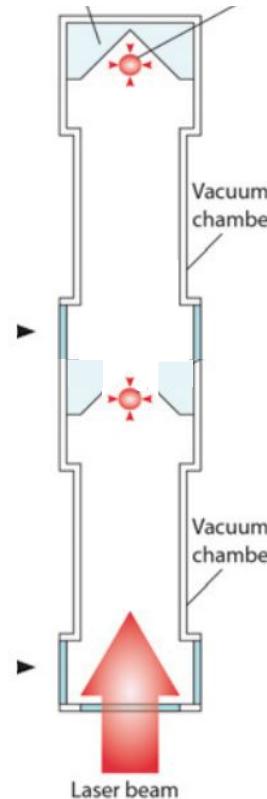

The control unit

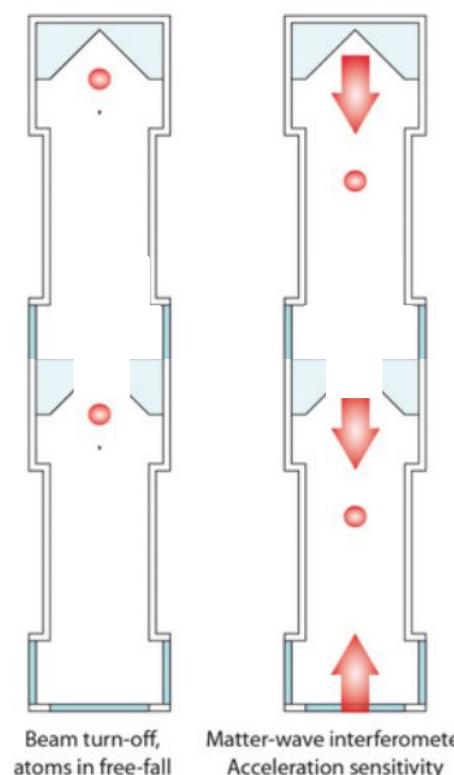

- . Lasers and amplifiers
- . Ultra-low noise electronics
- . Frequency synthesizer
- . On-board computer & controller
- . Power supplies

A-DIG: PRINCIPLE OF OPERATION

Atom trapping
And laser cooling

Free-fall
(atom interferometry)

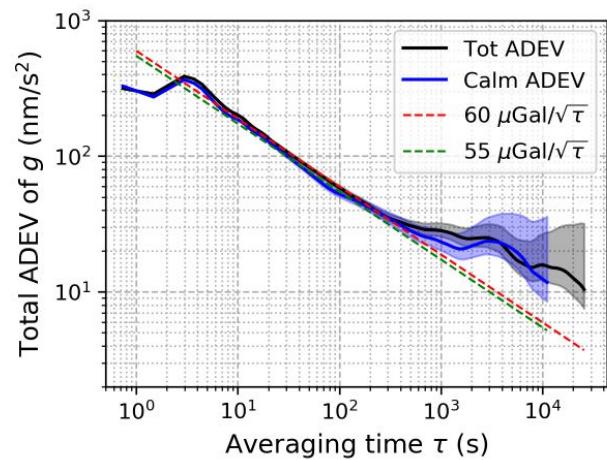

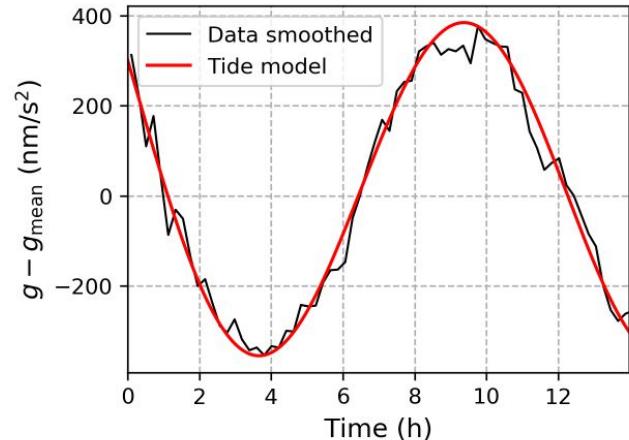

Read-out of the measurement

*patent WO2014106811A3
'cold atom
Gravity gradiometer'*

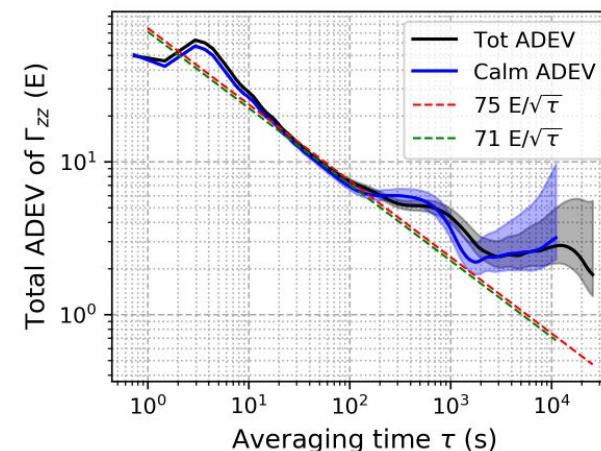

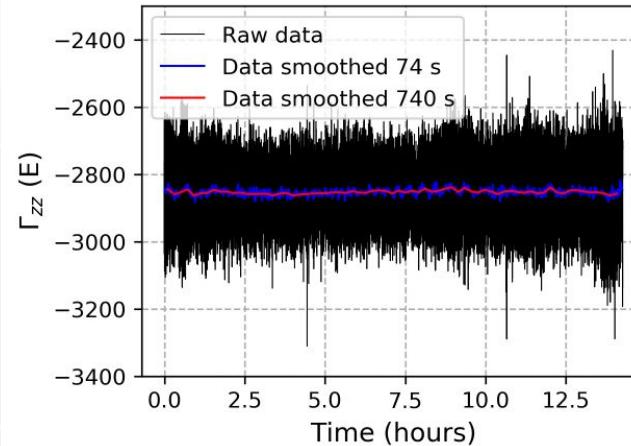

A-DIG measures the vertical gravity gradient using the differential measurement of two quantum gravimeters.

More details: *M.Langlois et. al. Phys.Rev.A 96, 053624 (2017)*

A-DIG: PRELIMINARY EVALUATION OF PERFORMANCE (dec. 2019)

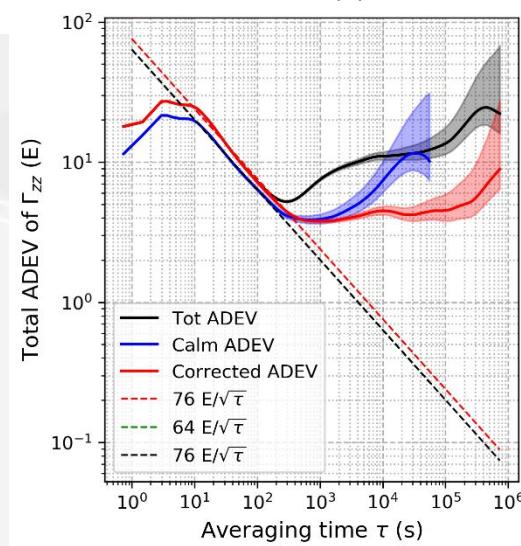

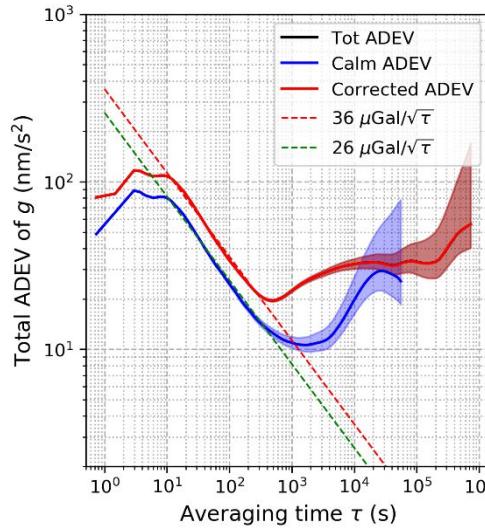

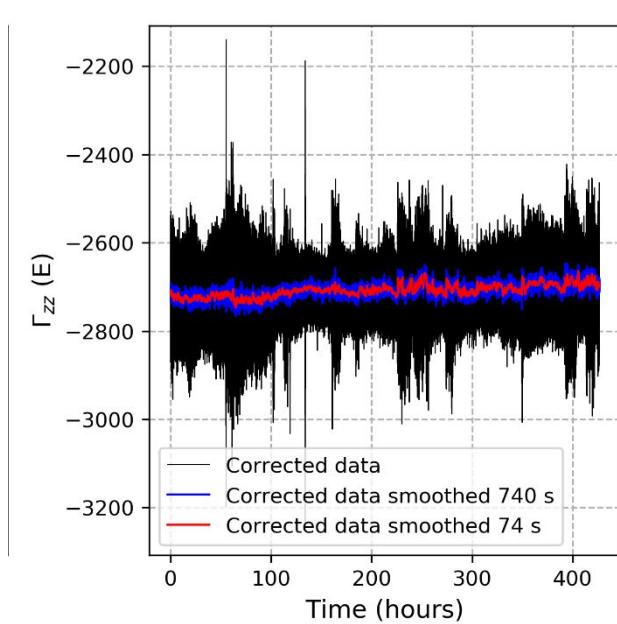

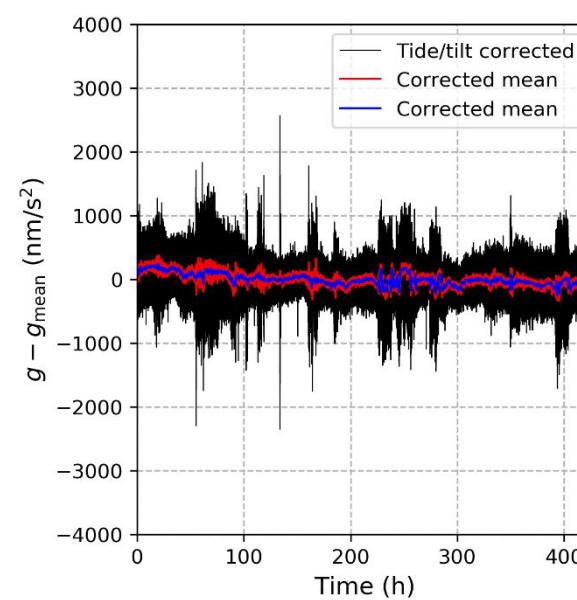

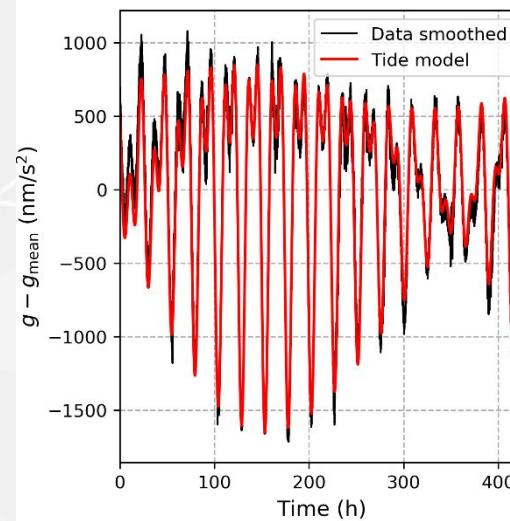

Gravity measurements :
Sensitivity = 60 $\mu\text{Gal}/\sqrt{\tau}$

Gravity gradient measurements :
Sensitivity = 70 E/ $\sqrt{\tau}$

$$1\text{E} = 0.1\mu\text{Gal}/\text{m}$$

A-DIG: LONGER MEASUREMENTS (jan. 2020)

Gravity measurements :
 Sensitivity = $30 \mu\text{Gal}/\sqrt{\tau}$
 Resolution of 1 μGal

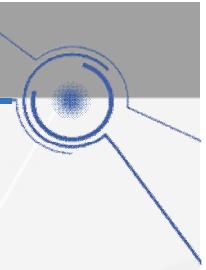

Gravity gradient measurements :
 Sensitivity = $70 \text{ E}/\sqrt{\tau}$
 Resolution of few E

$$1\text{E} = 0.1\mu\text{Gal}/\text{m}$$

A-DIG: CONCLUSIONS AND PERSPECTIVES

- A differential gravimeter has been developed and demonstrated
- Simultaneous measurements of both g and dg/dz
- Preliminary characterizations at nominal performances
- 18 day continuous operation validated
- Next steps: improvement of performances and utilization for geosciences (observatory measurement)
