And the rest of the On-Ramps Writing Team**

Why On-Ramps?

The context

- don't have a lot of time?
- highway speed, with advice and resources to help you actively engage students effectively in the classroom.

Why focus on active learning?

It dawned on me about two weeks into the first vear that it was not teaching that was taking place in the classroom, but learning.

Pop star Sting, reflecting upon his early career as a teacher

- People learn when they are actively engaged in building

If the answer to the question is yes, don't do it.

General Ruben Cubero, Dean of the Faculty United States Air Force Academy Novak et al., 1999, Just-in-Time Teaching

- What we do in the classroom matters. If we care about student learning, we need to create environments in the classroom that promote student learning.
- methods, such as those in these On-Ramps, are well documented to be effective in improving student learning.

Writing & disseminating On-Ramps

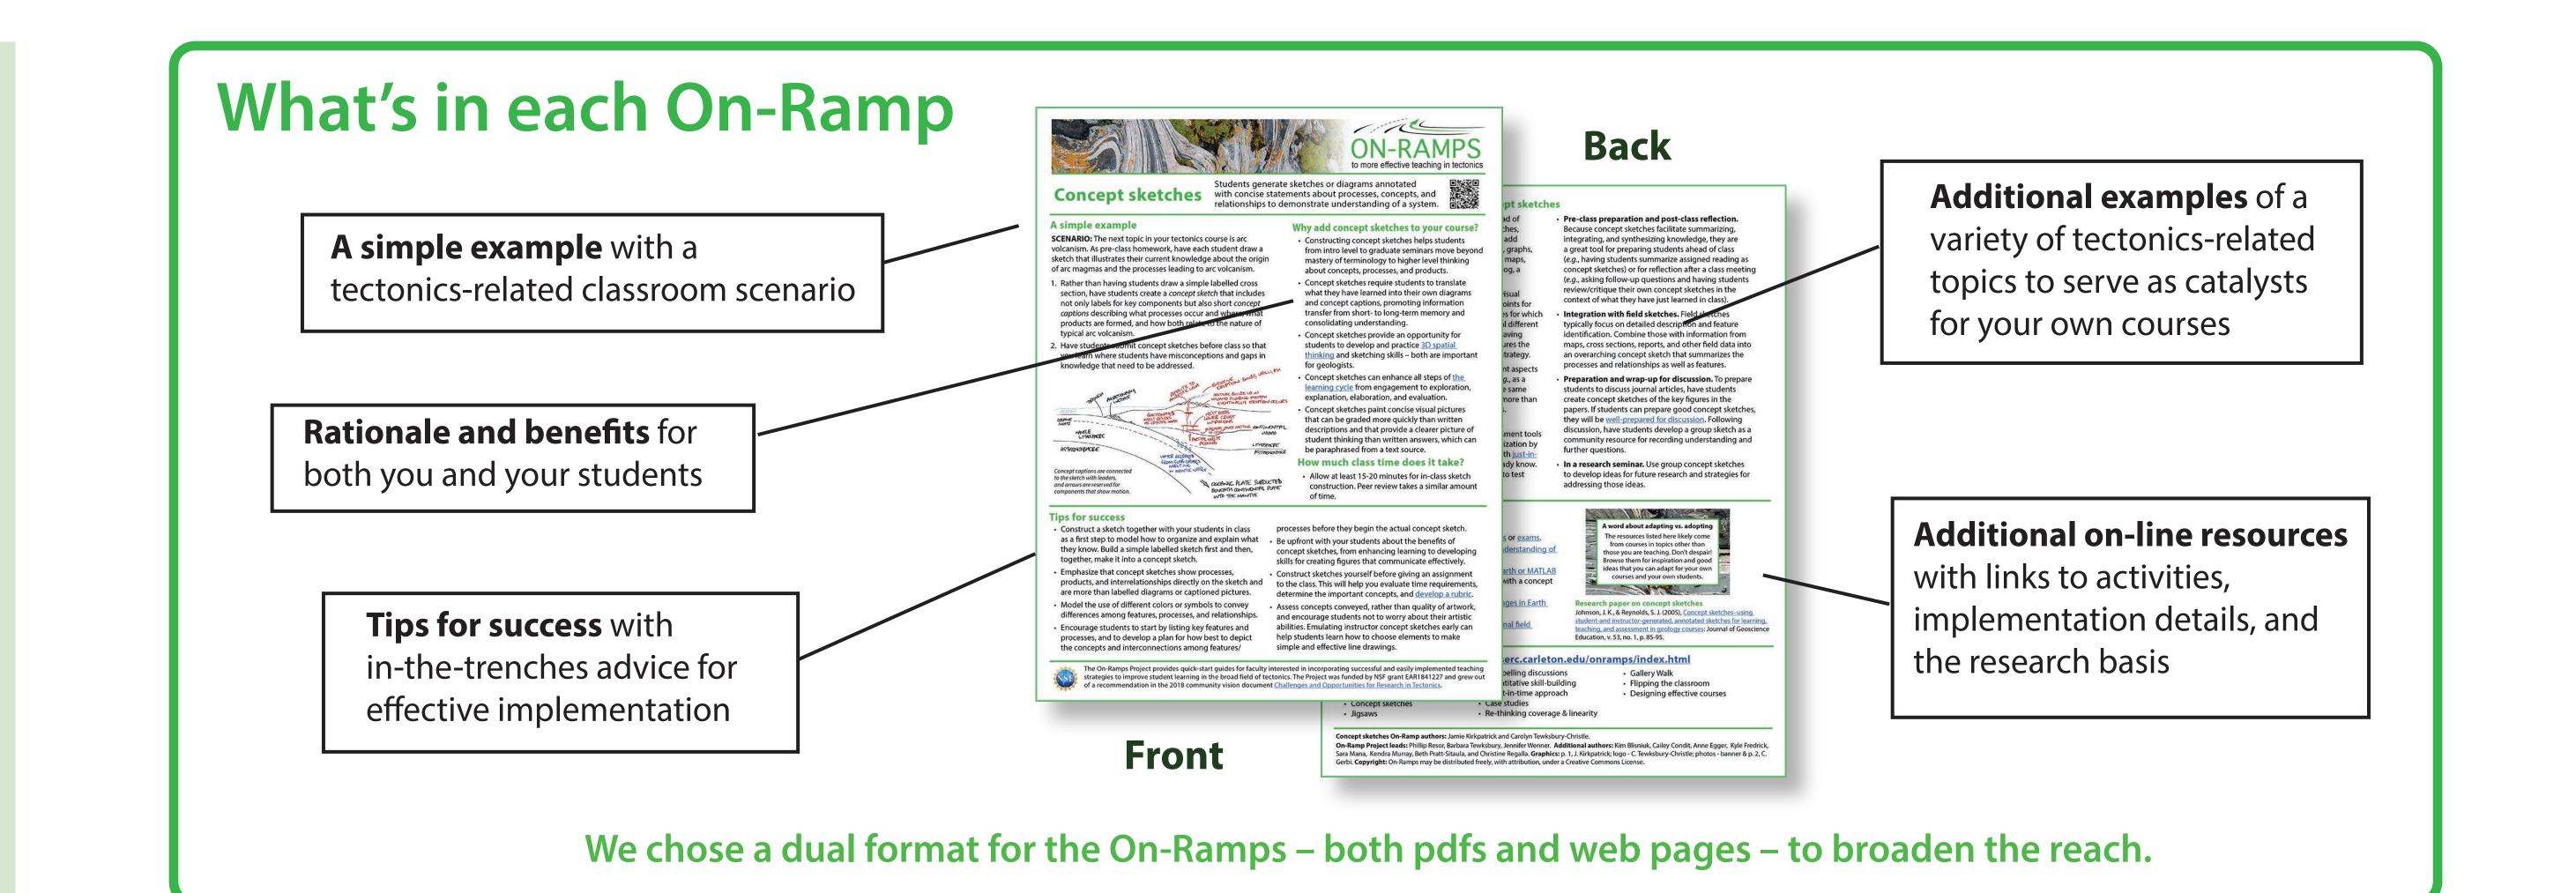

- In April of 2019, an international team of passionate educators from across the spectrum of the broad field of tectonics gathered at Wesleyan University for an NSF-funded writing soirée.
- Over the course of three days, we wrote the initial eight On-Ramps. Members of the writing team will continue to be involved in developing additional On-Ramps, and we hope that faculty in other areas of the geosciences will take the idea and develop On-Ramps in their own fields.
- On-Ramps will reside on the website *Teach the Earth*, managed by the National Association of Geoscience Teachers (NAGT), and will be linked from a variety of other web sites.

The On-Ramps Project was funded by NSF grant EAR1841227.

to more effective teaching in tectonics

Do you want to incorporate more active learning in your classes but aren't sure where to start? Are you looking for new strategies to try or fresh ideas for techniques that you already use?

What courses do On-Ramps include examples for?

plate tectonics, geophysics, regional tectonics,

- inspiration and good ideas that you can adapt for the topics

 In 2018, the tectonics document to NSF on the challenges and opportunities for research in tectonics. In the section on achieving the vision, the document points toward the need to recruit and

rigorously trained work force.

- The vision document suggests developing a tectonics educator's onramp to facilitate practical implementation of best practices in geoscience education.
- Our project owes its inspiration to this report and to a request from lead authors Kate Huntington and Keith Klepeis to spearhead the first phase of development.

Jennifer Wenner (University of Wisconsin, Oshkosh), and Kyle Fredrick (California

Fusseis (University of Edinburgh), and Jamie Kirkpatrick (McGill University).

Future On-Ramps

We will be writing additional On-Ramps over the course of the year, and all will be available from the On-Ramps web site (QR code below or on any of the pdfs).

for future On-Ramps,

We also hope that other disciplines in the geosciences will take up the baton and write On-Ramps for their own communities!
