

## #ShareEGU20

### **Session NH9.12/GM2.23 (Friday 8 May, 10:45-12:30 CEST)**

#### **“Methods and Tools for Natural Risk Management and Communications”**

*Convener: Raffaele Albano / Co-conveners: Valeria Cigala, Jonathan Rizzi, Emanuela Toto, Veronica Casartelli*

Welcome everyone to the session NH9.12

The session is dedicated to multidisciplinary contributions focused on methods, tools and best practices to improve natural risk mitigation and communication practices. Moreover, the contributions illustrate the significance of databases of geological information for a better, in-depth understanding of the causes of natural hazards, and their often catastrophic effects on the population, the built-up environment and the infrastructure. Abstracts and presenting materials of all the studies can be consulted and downloaded directly from the official #ShareEGU20 programme at <https://meetingorganizer.copernicus.org/EGU2020/displays/34863>

On Friday 8 May, 10:45-12:30 CEST, displays will be presented and authors will be available for discussion during an online text-based live chat that will follow the order of appearance in the programme.

During the live chat discussion, each presenting author is asked to prepare (if possible, do it in advance) 3-4 highlights to summarize the proposed contribution. Then, we invite all virtual participants to feed the discussion with questions that can be followed by concise replies from the author. Please consider that a time-block of 5-7 minutes is dedicated to each presentation in order to equally give visibility to all submitted works. In this regard, we invite the participants to contact the author/s separately for a more intensive and exhaustive discussion and remind you that you can comment presentation material until the end of May 2020. Further, author contacts are available on each abstract and can also be shared during the session from both authors and attendees.

We invite all participants and attendees to enjoy the session with fruitful and constructive comments, ensuring a safe and respectful environment for participants in agreement with the EGU's Code of Conduct (<https://www.egu.eu/about/code-of-conduct/>).

Regards from all the session conveners!
