

## Session NH3.4 - Hydrological and geomorphological processes in natural and human-modified slopes and landslides

*Conveners:* Thom Bogaard, Giacomo Pepe, Massimiliano Bordoni, Stella Moreiras, Roberto Greco

*Live chat:* Thursday, 07 May, 16:15–18:00

Welcome everyone to the session NH3.4!

### Session target

The session wishes to represent an opportunity for sharing and exchanging knowledge, approaches and achievements between experts and young scientists about the role of environmental and anthropic factors on the hydro-geomorphological response of natural and human-modified slopes and catchments.

### Organization of presentations in the live text-based chat

- We will follow the displays ordering reported in EGU NH3.4 session program.
- During the session, each author will have the opportunity to show his research.
- During the live text-based chat, each author is asked to prepare a 1-2 sentence/s to introduce and summarize the work presented together with some points highlighting the main findings/conclusions.
- Conveners will leave few minutes between displays so that attendees may see the uploaded presentation before the discussion.
- Subsequently, 3-5 minutes will be available for each display for questions/discussions.
- We invite attendees to contact authors separately for further and more detailed discussions.

We are looking forward to meeting you online at our session!!
