

SSS7.2. Restoration, rehabilitation and management of degraded landscapes and ecosystems

This session will showcase contributions covering research conducted in this area of research describing experimental, observational, and theoretical studies. Topics of interest are (although not limited to) causes and impacts of **land degradation and remedial actions and strategies for restoration at local, regional or global scales.**

NEW! We invite all participants to submit their contributions to the [Special Issue "Soil Degradation, Restoration and Management: Current Status and Future Challenges"](#) in the journal '*agronomy*'. Deadline: 31 October 2020.

Please note that all submissions go through a peer-review process. Journal IF: 2.259.
