

HS2.2.1 "Models and Data: Understanding and representing spatio-temporal dynamics of hydrological processes".

Conveners: Björn Guse, Shervan Gharari, Sina Khatami, Luis Samaniego, Simon Stisen

The procedure of our chat discussion will be as follows:

- 1) We as the conveners will introduce each display
- 2) The author will then post a 50-word summary of his/her display. During this time, only the presenting author has the right to post a text.
- 3) Next, we will re-open the chat for everyone to pose questions for a short-time (about 1 min). Please prepare the question in advance to save time.
- 4) After that, we will mute the chat for all except of the main author who has then the remaining time to answer the questions. Please be aware that in the case of a high number of questions, it might be that not all questions can be replied. It is hereby the decision of the main author to which question he/she replies.
- 5) After the 4-5 minutes chat time, we as the conveners will close the discussion of this display and announce the discussion of the next display. Thus, only one display is discussed at the same time.

Please be aware that you can always pose a question or comment on the page of the display. We encourage everyone to do this in the case that the question could be not replied due to limited time or if you have an additional question.

Björn Guse (for the conveners of HS2.2.1)
