SSP1.1

[Open session on stratigraphy, sedimentology and palaeontology](#) ▶

This session offers stratigraphers, sedimentologists and palaeontologists an opportunity to present papers that do not fall within research areas covered by this year's special themes. The poster-only format provides the ideal opportunity to present research specifically targeted to the audience.

Public information:

During the chat, on Mon 04 May, 10:45–12:30, 4 abstracts (with or without uploaded display material) will be open for discussion. The conveners will moderate the chat discussion. We will discuss the abstracts in the order in which they appear in the program. After we call an abstract, we ask the author to provide the chat room with a 1-2 line summary of their work (best to copy-paste a pre-written sentence). Then we can proceed to Q&A. We kindly ask all chat room participants to keep the chat on subject, and not to disrupt the Q&A.
