The Interactive Climate Atlas of Climate Change serves as a pivotal application tool designed to empower practitioners and policy-makers in Ukraine by providing dynamic, user-friendly access to crucial climate information. This innovative platform amalgamates scientific data, visualizations, and interactive features to elucidate the multifaceted impacts of climate change on the Ukrainian landscape. The atlas not only enhances climate literacy but also fosters a collaborative approach to address environmental challenges, thereby enabling practitioners and policy-makers to formulate effective strategies for sustainable development in the face of a changing climate. This application not only bolsters the resilience of Ukrainian communities but also exemplifies a scalable model for informed decision-making in regions globally affected by the profound impacts of climate change.
