

How to bring meteorology close to school

M. Jarosova

Slovak Hydrometeorological Institute, Forecasts&warnings, Bratislava, Slovakia (miriam.jarosova@shmu.sk)

Forecasters from Central Forecasting Office SHMI in Bratislava, Slovakia, provide a lot of short lessons from meteorology for pupils.

Meteorologists try to explain this part of physics for very young peoples. Pupils in Slovakia got basic information on the meteorology in the age of 14 years in elementary school. They come and obtain more interesting information on this part of physics in Forecasting Office.

Our lessons are focused on good weather forecast preparing. Pupils got a lot of information on the various data which are used in this process, very often they can see the satellite and radar data for the first time .

Theachers of physics all around Slovakia know about this lessons and very often they come with pupils to Forecasting Office.

We provide more then 45 lessons of meteorology every year.

Last year we provided lessons of meteorology for more then 800 pupils.
