The Friuli Venezia Giulia Meteorological Union (UMFVG) is a socially usefull No Profit Organization involved in scientific dissemination of meteorology and climatology. To reach this goal the UMFVG, which involved both profesionists and passionates of weather and climate, organizes conventions, courses, conferences and publishes a quarterly journal, the “Meteorologica” (ISSN 1827-3858). UMFVG is a member of EMS.

8 years have passed since the first edition of the journal, now totally renovated with more pages and topics, part of them translated in 4 languages (Italian, English, Slovenian and German). The “Meteorologica”, edited by the UMFVG, is composed of various columns, some more popular, others more scientific, but all of them with the aim of scientific dissemination to the general public. In the actual last edition of the journal, find place the columns of ARSO of Ljubljana (Slovenia), ZAMG of Klagenfurt (Carintia-Austria) and ARPA OSMER of Udine (Italy), which comment every time the seasonal weather trend. There is also the column of CNR ISMAR, which comments the principal aspects of sea level and sea temperature in the Northern Adriatic. The magazine also host the “Climate Monitor” column edited by Major G.Guidi, forecaster of the Italian Air Force and of RAI television. Last, but not least, there are various deepenings and didactics columns in order to deepen several meteo-climatological themes. The editorial staff have to thank the passion and free will of all of those who actively worked together for the realization of this project if now the thought of delivering “Meteorologica” also in other European countries is not only an ambitious idea but a real objective.
