

## European Meteorological Society and education in atmospheric sciences

T. Halenka

Charles University, Prague, Dept. of Meteorology and Environment Protection, Faculty of Mathematics and Physics, Czech Republic

One of the important task of the EMS is the activity to promote public understanding of meteorology (and sciences related to it), and the ability to make use of it, through schools and more generally. EMS is performing this task through the Educational Project which is trying to work under this EMS mission and objectives to help the process by means of its own activities and supporting some activities of EMS as a whole, e.g. organizing educational session of EMS Annual Meetings, cosponsoring other educational meeting etc. One of the elements of its own activity is the analysis of the position of atmospheric science in framework of curricula in educational systems of European countries as well as in more general sense, the place of Science education in the system.
