

Changes in distribution of predictions during the years.

M. Jarosova

Slovak Hydrometeorological Institute, Forecasts&warnings, Bratislava, Slovakia (miriam.jarosova@shmu.sk)

The distribution of predictions for public is very important task for meteorologists. Meteorologists from the SHMU tried to find changes in using media for taking information about the prediction or warning. During very popular action Open day at SHMU were the changes in taking the predictions detected. The outputs from analyses of this data set were in some groups of customers very interested. The data set is more then 10000 respondents. The outputs were used for improving the job of meteorologists
