Simulators are widely used for the training of people. But why are there so little forecasters trained with the help of simulators? And why should we use simulators for training forecasters? I will try to give a more complete view of why you should and how you can use a simulator in your training at home. Items like what do you want to achieve with your training, how are you going to make it a success and the DO's and DON'Ts will come along during this talk.
