

Professional Accreditation in the UK: Become a Registered or Chartered Meteorologist

Liz Bentley and Chloe Moore
Royal Meteorological Society, UK

In an increasingly competitive world, employers are looking for people with distinguished qualifications that make them stand out as the best people to employee. For individuals, being an accredited meteorologist has numerous benefits and allows you to gain recognition, be a reputable source as well as opening the doors for career advancement.

The Royal Meteorological Society offers two accreditation schemes in the UK; Registered and Chartered Meteorologist. The aim of accreditation is to provide professional qualifications in meteorology which will satisfy clients, employers and the public at large that individuals have reached and continue to maintain a specified level of professional knowledge and experience and that they adhere to a declared code of professional conduct.

Additionally, the Society further supports meteorologists with Continued Professional Development, through our specially developed online ACCSYS system. This enables members to continue to chart their progression throughout their careers, providing a tool for easy reference regarding their development as well as being useful for those returning after a career break.
