Evalution Quality Control with MAVIS - A meteorological analyzing and visualization software toolbox

Jennifer Lenhardt, Barbara Frueh, Klaus Pankatz, Andreas Paxian, and Christian Steger
Deutscher Wetterdienst, Offenbach, Germany (jennifer.lenhardt@dwd.de)

The MAVIS evaluation and visualization software provides a standardized data and evaluation system framework. It both contains a data base for model and evaluation data sets and a suite of tools to evaluate data. It is developed as an easy to use low-end application. Users are enabled to add own data sets which only have to satisfy the CMOR standard and/or develop evaluation tools and use them inside the MAVIS framework. The MAVIS Software will be presented in our poster.
