Abstract

It sometimes seems impossible for scientists to do something with schools. However, this is not impossible but require some organization. In summary, the best advices would be : don't stay alone and use the best opportunities. This poster will show examples of what is done in Liege University for popularizing astronomy. Our events reach a broad range of ages (typically 6-18 yr old) and concern a broad range of activities (stargazing, training, hands-on workshops,...). They have enabled hundreds of school students to get their first contact with the sky.
