

Changes on Mars 2003 - 2018

Bernd Gährken

(1) Bavarian Public Observatory Munich (bgaehrken@web.de)

Abstract

Changes on Mars are visible with amateur telescopes. The changes are reported several times during the last 200 years.

With modern Astro-Webcams it's possible to generate detailed groundbased pictures. Detailed comparisons show clear changes.

Some images from 2003, 2005 and 2007 will be presented and compared with new pictures.

A new poster with pictures from 2018 is planned. Here is a poster from EPSC 2008:

1. Poster

[1] Gährken, Bernd: Changes on the martian surface during the oppositions 2003, 2005 and 2007.
