Planetary Science in Ethiopia

Solomon Belay Tessema

Ethiopian Space Science and Technology Institute (ESSTI) and Ministry of Innovation and Technology

Planetary Science in Ethiopia research has been emerged in Ethiopia based on the establishment of Entoto Observatory and Research Center (EORC) as well as special commencement of special graduate in three specialized fields such as (astronomy and astrophysics, space science, remote sensing and Geodesy). The installation of the twining optical telescope and ratification of national space policy has opened many opportunities to focus of planetary science research and training in Ethiopia. Ethiopia has progressed in research, training, and technology and infrastructure development in planetary science, space technology and astronomy. This paper will focus on planetary science and related activities, current development and future prospects.
